

Dr Filippa Lentzos is a Senior Research Fellow at King's College London, with a joint appointment in the Department of Global Health & Social Medicine and the Department of War Studies. She specialises in the security and governance of emerging technologies in the life sciences. Much of her work is focused on synthetic biology, often identified as the area of the life sciences most susceptible to misuse, but she also examines other emerging fields like genome editing, potentially pandemic pathogens and neurobiology.

Her book *Biological Threats in the 21st Century* was published by Imperial College Press in 2016. A second book *Synthetic Biology & Bioweapons* is forthcoming.
